Product Description

Metal Wide Belt Sander

General Description

A metal wide belt sander, also known as a wide belt grinding machine or simply a wide belt sander, is a powerful industrial tool used for sanding, smoothing, and finishing large metal surfaces. It consists of a horizontal conveyor belt that is typically several inches wide, which is driven by motorized rollers. The belt is coated with abrasive material such as sandpaper or grinding belts, which allows it to remove material from the metal surface.

The metal wide belt sander is designed for one wide part or multi smaller parts processed in a production line or in an independent way. Vacuum sucking work-table can fix minimum 100mm smaller parts on the conveyor belt to insure a good deburring or finishing. Either high productivity in a flow line or reliable effects for smaller parts, this metal wide belt sander will not let you down, but saving labor and time.
